SCOPE OF APPLICATION

FERROVIAL identifies water as a finite and irreplaceable natural resource and consider access to water as a fundamental human right. Directly linked to global change and an underpinning and essential element of the circular economy.

With its value to our processes and the environment clear, our water management strategy is focussed so as to take into account its availability as a resource, its quality and the balance of the ecosystems where it is found.

In its role as a consumer and supplier of water-related services, FERROVIAL promotes the following principles **to all its stakeholders.**

PRINCIPLES

- Compliance with water legislation and regulations in force, also with the specifications of the international standards of reference and those set in-house by our organization, executing water management so as to attain the highest quality standards.
- Support for the development of regulatory frameworks focussing on efficient and sustainable water use.
- Commitment to align with public policy initiatives, such as the SDGs, water stewardship and/or collective action.
- Water footprint calculation methodology based on international standards and widely-recognized water initiatives
- Responsible and efficient management of the resource, covering the whole of its integral cycle, facilitating social development and the conservation of ecosystems, optimizing the resulting balance in the Group's water footprint.
- Setting indicators, goals, monitoring procedures and strategies to enable ongoing measurement and assessment of the degree of efficiency of the integral water cycle and its responsible use in the company's direct operations.
- Publication of the results of the company's integral water management.
- Commitment to water-related innovation, searching for solutions to the rising demand for potable water and deterioration of water quality due to pollution. Support for the development and employment of new technologies enabling a more efficient use of water as a resource.
- Inclusion of water usage and management in the company's risk management strategy.
- Company engagement to enable access to clean water and sanitation for the population in developing countries.
